

# South Korea Decoupling Replication

Jeffrey Stark

March 2, 2026

## **Abstract**

TODO: Abstract (150–250 words). Summarise motivation, data, methods, and main findings. End with the substantive implication.

## **1 Introduction**

TODO: Motivate the paper. State the puzzle or gap. Preview the argument and contribution. End with a roadmap sentence.

## **2 Theory**

TODO: Lay out the theoretical framework. Derive testable hypotheses. Make clear what the existing literature predicts and where this paper departs from it.

**H1:** TODO

**H2:** TODO

## **3 Data and Methods**

### **3.1 Data**

TODO: Describe the data source (survey, country coverage, wave years, N). Note any exclusions or weighting decisions.

### **3.2 Measures**

#### **3.2.1 Dependent Variables**

TODO: Define DVs and cite the survey items.

#### **3.2.2 Independent Variables**

TODO: Define IVs, operationalization, and normalization decisions.

#### **3.2.3 Controls**

TODO: List controls and justification.

### **3.3 Analytic Strategy**

TODO: Describe model specification (OLS/logit/FE/etc.), clustering, and any robustness checks.

## **4 Results**

TODO: Present findings. Lead with the main result, then unpack it. Reference pre-loaded figure and table objects from `analysis/results/`.

## **5 Discussion**

TODO: Interpret the results. Address alternative explanations. Connect back to the theoretical framework.

## **6 Conclusion**

TODO: Summarise the contribution. State limitations. Suggest future research.

## **References**
